

# BHP Group Limited (BHP.AX) — Equity Research Note

Sector: Basic Materials | Industry: Diversified Mining (Iron Ore, Copper, Coal, Potash) | Date: 15 June 2026 | Analyst: Equity Research (Student Portfolio Project)

**RECOMMENDATION:**  
**SELL**

Current Price: A\$57.00 | DCF Fair Value: A\$41.27 (-27.6%) | Comps Implied: A\$32.47

## Company Overview

BHP Group is a leading global resources company, with operations spanning iron ore, copper, metallurgical and energy coal, and potash. Headquartered in Melbourne, Australia, BHP is the largest company on the ASX by market capitalisation.

## Key Financials & Valuation Summary

| Key Financials (USDm) | FY24A  | FY25A  | FY26E  | FY30E  | Valuation Summary           | Value           |
|-----------------------|--------|--------|--------|--------|-----------------------------|-----------------|
| Revenue               | 55,658 | 51,262 | 52,287 | 58,280 | WACC                        | 9.34%           |
| EBITDA                | 29,016 | 25,978 | 27,189 | 29,140 | Terminal Growth Rate        | 2.5%            |
| EBITDA Margin         | 52.1%  | 50.7%  | 52.0%  | 50.0%  | Enterprise Value (USDm)     | 158,429         |
| Net Income            | 9,601  | 11,143 | 13,948 | 14,798 | Equity Value (USDm)         | 145,505         |
| Free Cash Flow        | 11,392 | 8,898  | 11,334 | 11,884 | <b>DCF Fair Value (AUD)</b> | <b>A\$41.27</b> |
| Net Debt              | 9,120  | 12,924 | 13,000 | 13,000 | EV/EBITDA Comps (AUD)       | A\$32.00        |
|                       |        |        |        |        | P/E Comps (AUD)             | A\$32.93        |
|                       |        |        |        |        | BHP EV/EBITDA (current)     | 8.2x            |
|                       |        |        |        |        | Peer Avg EV/EBITDA          | 4.8x            |

## Investment Thesis

DCF implies -27.6% vs current price; comps (avg of EV/EBITDA & P/E) imply -43.0%. Blended view: -35.3%. BHP trades at a premium to peers (8.2x EV/EBITDA vs peer avg 4.8x), reflecting its scale, low-cost iron ore position and copper growth optionality - but this premium leaves limited margin of safety at current levels.

| Bull Case                                                                                                                                                                                                                                                                                                              | Bear Case                                                                                                                                                                                                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| World's lowest-cost major iron ore producer, providing earnings resilience through commodity cycles. Growing copper exposure (~45% of EBITDA) positions BHP toward structural decarbonisation/electrification demand. Strong balance sheet (net debt well within target range) supports continued shareholder returns. | Trades at a meaningful premium to peer multiples and DCF fair value, leaving limited margin of safety if commodity prices soften. Elevated capex (Jansen potash project) weighs on near-term free cash flow and dividend coverage. Earnings remain highly sensitive to iron ore and copper price swings outside management's control. |

## DCF Sensitivity — Implied Share Price (AUD)

| WACC \ Terminal g | 2.0%     | 2.5%     | 3.0%     |
|-------------------|----------|----------|----------|
| 8.34%             | A\$45.62 | A\$48.92 | A\$52.84 |
| 8.84%             | A\$42.02 | A\$44.79 | A\$48.04 |
| 9.34%             | A\$38.92 | A\$41.27 | A\$43.99 |
| 9.84%             | A\$36.22 | A\$38.23 | A\$40.53 |
| 10.34%            | A\$33.83 | A\$35.57 | A\$37.55 |

Highlighted cell = base case assumptions. Fair value is most sensitive to the WACC assumption; a 1pp WACC decrease lifts implied value materially due to the long-duration terminal value component.

## Methodology Summary

**3-Statement Model:** FY24A-FY25A actuals from BHP's FY2025 Annual Report, projected FY26E-FY30E using driver-based assumptions (revenue growth, EBITDA margin, D&A and capex as % of revenue). **DCF:** 5-year explicit FCF forecast discounted at WACC (CAPM-derived cost of equity + after-tax cost of debt), plus a Gordon Growth terminal value. **Comps:** EV/EBITDA and P/E multiples from a 5-company diversified mining peer set applied to BHP's FY25 EBITDA and EPS. Full assumptions, formulas and source citations are documented in the accompanying Excel model and GitHub README.
